

MYKHAILO MALIAVIN

Lead Full-Stack Engineer - Angular - Java/Spring Boot - Python/Django

Frankfurt am Main, Germany - otecmuxah@gmail.com - linkedin.com/in/mykhailo-maliavin

Languages: English (C1) - German (B1) - Ukrainian (Native) - Russian (Native)

Work authorisation: German residence permit

Availability: 4 weeks - works on contract via own entity

PROFILE

Engineering lead with over a decade building highly scalable, performant web applications - Angular and TypeScript on the front end, Java/Spring Boot and Python/Django behind it. Currently leading 6 developers within a 50-person engineering organisation at IATA, delivering the ISAGO audit management platform across an Angular 22 client and six Java 25 / Spring Boot 4 microservices, alongside the public Airline Retailing Maturity Index on Django.

Over the past year I have rebuilt how my team ships. AI agents now carry a ticket from its number to a reviewed pull request - planning, test-first implementation, end-to-end verification and the PR description - running on a skill library I wrote by hand to encode our architecture, testing conventions and definition of done. Review is the human step; authoring largely is not.

Self-taught, and I lead from the front: earlier I founded and architected the front end of a finance learning platform serving 100,000+ users (sub-1s load, sub-200KB bundle) with a team of 5, and built and released its cross-platform mobile app single-handed. I own features the whole way - design, database migration, REST contract, UI, automated test, CI pipeline - and I still write the hard ones myself.

SKILLS

Languages: TypeScript, JavaScript, Java, Python, PHP, SQL, HTML5, SCSS/CSS

Front End: Angular 1-22, Angular Material, Angular Signals, RxJS, NgRx, Nx monorepo, React, Next.js, Ionic, Capacitor, Tailwind CSS, PWA / Service Workers

Back End: Java 25, Spring Boot 4, Spring Data JPA / Hibernate, REST API design, OAuth2 / JWT, Python 3.13, Django 6, PHP 8 / Symfony, NestJS, Flyway, PostgreSQL, MySQL / MariaDB

Cloud & DevOps: AWS (S3, SQS, SNS, SES), Docker, Docker Compose, Nginx, Terraform, Firebase, Fastlane

Testing & Quality: Playwright (E2E + visual regression), Vitest, Jest, Jasmine / Karma, Cypress, pytest, PHPUnit, JUnit, SonarCloud, Snyk, OWASP Dependency-Check

CI/CD: Bitbucket Pipelines, GitLab CI, GitHub Actions, Azure DevOps, Jenkins

AI-Assisted Engineering: Agentic coding workflows (Claude Code), hand-authored agent skills, ticket-to-pull-request automation, agent-driven TDD loops, automated E2E verification, MCP integrations, prompt and context engineering

Integrations: Azure AD / Entra ID SSO (MSAL), SCIM 2.0, Stripe, PayPal, Apple In-App Purchase, Google Tag Manager / GA4, Datadog, Google Genkit

Domains: Aviation data & IATA NDC standards, cloud data protection, financial settlement, EdTech, HIPAA-compliant healthcare

PROFESSIONAL EXPERIENCE

Senior Full-Stack Developer (Contract)

International Air Transport Association - Geneva, Switzerland (remote)

2024 - Present

Leading a team of 6 developers within a 50-person engineering organisation, delivering four platforms across aviation operations, certification and finance.

AI-Assisted Delivery - introduced across the team

- Integrated AI agents into the development flow, taking a ticket from its number to an open pull request: the agent plans the change, implements it test-first, runs Playwright end-to-end verification against the running application,

and writes the PR description - turning the authoring phase into a review phase and making delivery close to autonomous.

- Made that output reviewable rather than merely generated: each run also writes the feature documentation, updates the ubiquitous-language files that keep domain terms consistent across the codebase, and saves evidence artefacts - screenshots and request/response transcripts - so a developer can confirm the work was done correctly without repeating it.
- Wrote the skill library the pipeline runs on - hand-authored, repository-specific instructions encoding architecture, testing conventions, evidence requirements and definition of done - so agent output arrives at the standard a reviewer would otherwise enforce by hand.

ATMPM - Air Traffic Management Performance Monitoring

- Built a modern web application using Next.js 15 (App Router), React 18, TypeScript and ShadCN/UI with Tailwind CSS for monitoring and forecasting air traffic management performance, integrating AI-powered analysis via Genkit (Google AI) for anomaly detection and traffic forecasting.
- Implemented the ATM Benchmark module with interactive Leaflet maps, Key Performance Area detail views with Recharts/Plotly visualisations, an efficiency illustrator with flight plan modelling, and comprehensive user management with Azure MSAL authentication and role-based access control.

AMSS - Audit Management Self-Service System

- Delivered 138 Jira stories and defects end to end across an Angular 22 enterprise client and six Java 25 / Spring Boot 4 microservices - IATA's platform for running the ISAGO ground-handling certification programme worldwide.
- Owned the modules scheduling managers work in daily: audit requests, auditor profiles, projects and contracts, conflict-of-interest removal workflows, blackout periods, performance records and admin dashboards - with filtering, search and 85%+ test coverage.
- Implemented the auditor pairing lifecycle in the Spring Boot core service - multi-auditor assignment where an audit becomes scheduled only once every remaining pairing confirms, per-auditor declines, and rescheduling triggered by the last decline - replacing a single-auditor assumption running through the entire domain model.
- Corrected the inputs feeding the Google OR-Tools CP-SAT auto-scheduling solver, eliminating false conflicts that were silently excluding available auditors from scheduling runs, and categorised every excluded audit by what actually blocked it - turning an opaque list into a work queue for the scheduling team.

ARM Index - retailing.iata.org

- Principal engineer on IATA's public Airline Retailing Maturity Index (Django 6 / Python 3.13), the registry where airlines and IT providers publish their NDC capabilities and certifications: 481 commits across models, migrations, admin, views, templates, tests and deployment.
- Built the Offers & Orders Implementation questionnaire as a full-stack Django module: hierarchical Section Topic Question Area Question structure, five question types including drag-and-drop ranking, 15+ models, object-level permissions via django-guardian, Excel export and a consent-gated public registry.
- Introduced the project's first automated E2E and visual-regression suite - Playwright with committed baseline images and a Dockerised Chromium runner - wired into every pipeline so layout regressions fail the build instead of reaching production.
- Hardened the platform: cleared Snyk CVE gates on Django and cryptography, fixed a path-traversal vulnerability in the XSD validation service, and converted destructive admin actions from GET links to CSRF-protected POST.

ASPAC Portal - Financial Operations

- Built accounts-receivable workspaces for seven international stations, plus financial settlement data services, billing and receiving, tax and debt-recovery modules in Angular 20.
- Delivered multi-step import wizards for bulk financial uploads - per-step validation, resumable state, approval tracking and inline error reporting - replacing manual spreadsheet handovers between finance teams, alongside SAP report retrieval and XLSX export.
- Held enterprise quality gates: Jasmine/Karma coverage published to SonarCloud and OWASP Dependency-Check running in CI across test, staging and production pipelines.

Senior Frontend Developer

Ciklum - Kyiv, Ukraine (remote)

2022 - 2024

client engagements below

- Delivered Angular front ends over .NET services to enterprise clients as part of Ciklum's outsourced engineering practice, in a team of 8 working Agile with Azure DevOps - Redstor 2022 - 2023, Deloitte 2023 - 2024.

Senior Frontend Developer (via Ciklum)

Deloitte - Kyiv, Ukraine (remote)

2023 - 2024

- Angular front-end development over .NET services within Deloitte's POD v5 team, in a team of 8 working Agile with Azure DevOps. Engagement details under NDA.
- Migrated the front end to an Nx monorepo with module federation across both client engagements, improving application performance by 40% and letting modules ship independently rather than as one release.
- Defined requirements and scoped features to budget with business stakeholders and presented new capability to them directly.

Lead Frontend Developer (via Ciklum)

Redstor - Kyiv, Ukraine (remote)

2022 - 2023

- Led front-end development on a cloud data-protection platform, Angular over .NET services, in a team of 8 working Agile with Azure DevOps. Engagement details under NDA.
- Owned the front-end architecture and the day-to-day direction of the work, running Agile delivery with Azure DevOps alongside .NET service teams.

Lead Frontend Developer

Corporate Finance Institute - Warsaw, Poland / remote

2020 - 2022

- Founded and architected the front end of Canada's most popular online finance learning platform (100,000+ users) - built from scratch, scaled to an Nx monorepo serving student, admin and B2B applications, holding sub-1s load time and a sub-200KB bundle.
- Built the platform's course player - the screen every learner spends their time in - with notes, table of contents, resumable progress, playback state and lesson navigation, plus the surrounding course, programme and bundle experience.
- Delivered the learner journey around it - enrolment, learning paths, search, certificates and transcripts, streaks, infinite-scroll catalogues, notifications, guided onboarding tours, dark mode and a B2B account switcher - alongside the shared component library the admin and B2B apps also consumed.
- Owned the revenue path end to end on the front end: Stripe and PayPal checkout, subscription upgrade / cancellation / reactivation, coupons and pricing plans, together with the Google Tag Manager / GA4 event layer and referrer attribution the growth team reported on.
- Created CFI's cross-platform mobile app from its first commit and shipped it to both stores single-handed - one Angular codebase targeting iOS and Android via Ionic + Capacitor, with Firebase authentication and analytics, Apple In-App Purchase, secure credential storage, offline and network-state handling and video playback, released through a Fastlane pipeline that reduced a manual submission checklist to a single command.
- Built the exams platform (Angular, Nx, Tailwind): exam start / auto-start and resume, third-party proctoring integration with graceful fallback when the provider fails mid-exam, anti-cheat lockdown, and results delivery.
- Kept the learning platform on a current stack through successive major Angular versions with no feature freeze, across a 133-project Nx workspace with NgRx state and a shared design system.
- Worked full-stack in PHP 8 / Symfony on the platform API - Apple Pay feature parameter with data-migration command, coupon prevalidation error handling, two-factor-authentication login response - with controller-level test coverage.
- Led a team of 5 as head of the front-end function: defined the architecture and requirements, ran sprint planning and task distribution, demoed to the business, and grew engineers from entry to junior level.

Javascript Developer, part-time

PENTASOFT - Madrid, Spain (remote)

2021 - 2022

concurrent with the CFI role above

- Built NEURON, an IoT platform giving growers real-time monitoring of sensor networks across farms, greenhouses and crop fields - Angular 12-13 with NGXS state management and a GraphQL API.
- Handled continuous sensor telemetry in the client with RxJS stream composition, keeping dashboards responsive under constant inbound data, with unit coverage in Karma.

Javascript Engineer

TEAM International - Kharkiv, Ukraine

2019 - 2021

- Built VaultMR, a platform for managing rehabilitation clinics, eliminating paper-based workflows across certification-heavy processes including HL7, eRehab and HIPAA compliance, with multi-factor authentication.
- Migrated a hybrid AngularJS application to Angular 2+, moving the codebase off a frozen framework and onto a supported release line.
- Cut page load time from 25 seconds to 6 through lazy loading of application modules and third-party libraries.

Javascript Developer

Eastern Peak - Kharkiv, Ukraine

2018 - 2019

- Built FYRE, a restaurant management and delivery CMS in Angular / RxJS / TypeScript - map integration for delivery zones, real-time in-browser table-service notifications, and a first load brought under one second by cutting bundle size.

Frontend Developer

Raccoon Gang - Kharkiv, Ukraine

2015 - 2018

- Customised the OpenEdX platform for online learning clients, delivering hundreds of tailored EdX environments - including Microsoft Cloud Society and Harvard DART - and converting an existing application into an SPA using Django and vanilla JavaScript.
- Implemented automated end-to-end testing with Selenium, halving manual testing effort.
- Built the company website from scratch to a sub-1-second first paint, and ran regular JavaScript training sessions for colleagues and newcomers.

Front End Developer

Webholder - Ukraine

2012 - 2015

- Delivered HTML and CSS markup for a tailoring management platform.

EDUCATION & CERTIFICATIONS

Master's Degree, Business Management - National Kharkiv Polytechnic University - 1998 - 2004

Master's Degree, Jurisprudence - Kharkiv National University of Internal Affairs - 1998 - 2004

HIPAA Certification - 2018 - 2019

Angular / Django Full-Stack Development - Udemy - 2020
